Art Unit: 1621

- X Claims 98-100, drawn to a method for treating vessel in a mammal, classified in class 424, subclass 423.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I-X are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the different inventions have different modes of operation and different functions . prior art anticipation and rendering obvious one invention would not necessarily anticipate and/or render obvious the other inventions. Thus, the inventions are patentably distinct. Applicant is required to elect one the methods of treatment or state on the record that the methods are obvious over one another.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
